Subject: Intox 8000's set for repairs

Matt,

While reviewing our maintenance reports, I noticed that 80-003061 has been sent to CMI for the 3rd time. Would you please take special note of this instrument? The last problem noted was voltage fail. We have noted several cold soldier joints and a few voltage problems/ unstable signals/ power supply problems as stated on CMI repair paperwork. I concerned we may have a revolving Intoxilyzer 8000.

Intox 80-003057 is visiting CMI for purge failure and Intox 80-004198 is visiting CMI for unstable signal. We have back-to-back classes scheduled December 7, 2010. We would appreciate getting them back by then if at all possible.

Thanks for looking into matter,

Margy
